SUMMARY

24-year-old M.Sc. Physics of Data student with a strong background in Physics, Mathematics, and Statistics. Proficient in Python, R, SQL, and various technologies, including Kafka and PySpark. Passionate about Data Science and Physics, with a keen interest in exploring innovative solutions for challenging problems.

SKILLS

Languages: Python, R, SQL, VHDL, Arduino, Latex,

Shell, VBA.

Technologies: Docker, Git, Anaconda, Kafka, Spark,

Keras, Pytorch, Numpy.

EXPERIENCE

DLR Bremen (DE)

Bayesian Modelling for Reusable Launch Vehicles

3/2022 - 6/2023 **Study Room surveillance**

University of Padua

Offered assistance, resolved issues, and ensured a conducive environment.

11/2023 NOI Hackaton SFSCON Edition

Bolzano

Participated in a 24h coding challenge.

EDUCATION -

10/2022 - 3/2025 Master Degree in Physics of Data

University of Padua

master degree program that merges and innovates the educational offers from Physics and Data Science

10/2019 - 10/2022 Bachelor Degree in Astronomy

University of Padua

Bachelor program provides solid foundation in physics, mathematics, and statistics.

9/2014 - 7/2019

Industrial thermo-technical expert

ITIS B. Castelli (Brescia)

Expert in designing, regulating, and controlling heating systems for civil and industrial installations, with strong academic background

PROJECTS

Streaming processing of cosmic rays using drift tubes detectors

Kafka, PySpark

Simulate a continuous DAQ stream of real data collected in a particle physics detector and publish the results in a dashboard for live monitoring.

Bayesian optimization with Gaussian Processes

Python, Tensor Flow

GP implementation to find the minimum of analytical test functions and fine-tune hyperparameters in a CNN. MCMC and point estimation with Maximum Likelihood are explored to find hyper-hyperparameters for the GP kernel

DETR for recognition of real chess game

Pytorch

DETR finetuning for recognition of chess pieces and their position on a real board. Conversion of the game state in FEN annotation.

Feature importance methods of simulated binary black holes

Python, Machine Learning

Determines what features have the highest impact on the evolution of a binary system into a Binary Black Hole using various Machine learning techniques.

Naive Bayes multinomial classifier for fake news detection

R

Accurate and automated identification of fake news sentences using Bayes Theorem.

LANGUAGES

English - C1, Italian - native
